# Statistics of Western Australia

# NON-RURAL PRIMARY INDUSTRIES 1971-72

W. M. BARTLETT

DEPUTY COMMONWEALTH STATISTICIAN

AND GOVERNMENT STATISTICIAN

By Authority. WILLIAM C. BROWN, Government Printer 1973

# ROUNDING OF FIGURES

Many of the figures appearing in the tables have been rounded to thousands without making those adjustments which would be needed to make the rounded figures add to the rounded total. It is for this reason that figures do not always add to the totals shown in the tables,

# NOTES ON STATISTICS OF MINING

# Sources of information

The statistics relating to mining, appearing in Tables 1 and 2 of this publication are derived from annual mining census returns supplied by enterprises engaged in mining in Western Australia. Details of the quantity, value and metallic content of minerals produced, appearing in Tables 3 and 4 have been compiled by combining publishable data from the census with additional information obtained from the Department of Mines, the Department of National Development and other sources.

Commencing with 1968-69 the mining census has been conducted on an integrated basis with other economic censuses (manufacturing, electricity, gas, retail trade and wholesale trade) and this has entailed major changes in its scope and its structure. Although major characteristics of the mining census as now conducted are outlined below, reference should be made to Chapter 31 of Official Year Book of the Commonwealth of Australia, No. 56—1970 or to pages 552-63 of the Western Australian Year Book, No. 10—1971 where a more detailed description of the mining and other integrated economic censuses is given.

## Period covered

In 1968 and earlier years, the annual mining and quarrying census related to years ended 31 December. However, commencing with 1968–69, the mining census was changed to a year ended 30 June to conform with the period covered by other integrated economic censuses in Australia.

The change in the census period from year ended 31 December to 30 June means that the 1968-69 census figures overlap the 1968 census results in regard to the period July to December 1968.

### **Definitions**

For reasons of confidentiality only key items of data are presented in Tables 1 and 2 of this publication for broad industry groups and selected classes. The items of data are as follows:

Establishment. This refers in general to a separate physical location predominantly engaged in mining.

Number of establishments. The number of establishments in operation at end of June. These relate to mining establishments as such and do not include the numbers of separately-located administrative offices and ancillary units.

**Persons employed.** Working proprietors at end of June and employees on the pay-roll of the las pay-period in June including those working at separately-located administrative offices and ancillar units in the State.

Persons employed in each State (and their wages and salaries) relate to those employed a establishments, administrative offices or ancillary units located in the State, even though the administrative offices or ancillary units may have served establishments located in another State.

Wages and salaries. The wages and salaries of all employees of the establishment, including thos working at separately-located administrative offices and ancillary units in the State. Drawing of working proprietors are not included.

Sales, transfers out and other operating revenue. Sales of minerals and other goods whether produced by the establishment or not, plus transfers out of minerals and other goods to other establishments of the same enterprise, plus all other operating revenue from outside the enterprise, such as commission, repair and service revenue. This excludes rents, leasing revenue, interest, royaltie and receipts from the sale of fixed tangible assets.

Stocks at 30 June. All the stocks of materials, fuels, etc. and mine products and work-in-progres of the establishment whether located at the establishment or elsewhere.

Purchases, transfers in and selected expenses. Purchases of electricity, fuels, stores and other materials, plus transfers in of goods from other establishments of the same enterprise, plus charges for processing and other commission work and payments to mining contractors, repair and main tenance expenses, outward freight and cartage, motor vehicle running expenses and sales commission payments.

Value added. Sales, transfers out and other operating revenue, plus increase (or less decrease in the value of stocks, less purchases, transfers in and selected expenses.

# Principles for measuring output of minerals

The quantities of individual minerals produced are recorded, in general, in the form in which the minerals are dispatched from the mine or from associated treatment works in the locality of the mine. Thus, for metallic minerals, the output is recorded as ore if no treatment is undertaken at or near the mine, and as concentrate if ore dressing operations are carried out in associated works in the locality of the mine. In addition to the basic quantity data, the content of metallic minerals (based on assay) are recorded. No allowance has been made for losses in smelting and refining and the quantities shown are therefore, in general, greater than the content actually recoverable.

The output of individual minerals is valued at the mine or at associated treatment works in the locality of the mine. This valuation is derived, in general, by valuing the quantity produced during the year at the unit selling value (including any subsidy), less any transport costs from the mine or associated treatment works at the point of sale.

It should be noted that issues of this publication prior to that for 1969-70 contained values of minerals at point of sale.

n.a. denotes 'not applicable'.

(a) Preliminary; subject to revision.

(b) Value is ex-mine.

(c) Not available for publication; value included in 'Other'.

(d) Includes production of bentonite.

(e) Value based on price per barrel published by Ampol Petroleum Limited.

(f) Values include amounts realised by the Gold Producers' Association Ltd. on sales of Western Australian gold—in 1969–70, \$1,780,000; in 1971–71, \$538,000; in 1971–72, \$2,232,000. They also include Commonwealth net subsidy paid to gold producers—in 1969–70, \$1,653,000; in 1970–71, \$2,467,000; in 1971–72, \$1,710,000.

(g) Comprises limestone used for agriculture, cement making, flux, glassmaking, lime burning and iron ore pelletising.

(h) Includes those minerals for which values are not available for publication.

# NOTES ON STATISTICS OF MINERAL EXPLORATION

Tables 9 to 12 contain annual details of mineral exploration in Western Australia. The statistics on exploration for minerals other than petroleum, published in Tables 9 and 10 are derived from the annual mineral exploration census, which is carried out by the Bureau of Census and Statistics and which does not include exploration for petroleum and natural gas. Information given in Tables 11 and 12 relating to petroleum and gas exploration is compiled by the Bureau of Mineral Resources, Geology and Geophysics.

It should be noted that the scope of the data collected by the Bureau of Mineral Resources, Geology and Geophysics differs in some respects from the scope of the data collected by the Bureau of Census and Statistics in regard to exploration for minerals other than petroleum. The differences are mainly in definition of terms and range of data collected and there is not, therefore, complete comparability between the two series.

# Mineral Exploration Census (excluding Petroleum Exploration)

For 1968 and earlier years the annual mineral exploration census (excluding petroleum exploration) related to the years ended 31 December. As from 1968–69, the reporting period for this census has been changed to a year ended 30 June, to conform with a similar change in the annual mining census. In Table 10 a double line is drawn between columns for 1968 and 1968–69 to indicate this break in continuity of the series. It should be noted that data for the six months ended 31 December 1968 are therefore included in both the 1968 and the 1968–69 figures in this table.

For the purposes of the census, mineral exploration consists of the search for and/or appraisal of new ore occurrences and known deposits of minerals (including extensions to deposits being worked) by geological, geophysical, geochemical, and other methods (including drilling). Exploration for water is excluded. The construction of shafts and adits is included if primarily for exploration purposes. Excluded are mine development activities (which include the construction of drives, shafts, winzes, etc.) in underground mines and the preparation of quarrying sites for open-cut extraction (including over-burden removal) carried out primarily for the purpose of commencing or extending mining and quarrying operations.

Information on private exploration is divided into three categories:

- (i) Private exploration on production leases, which relates to exploration carried out on production leases by privately operated mines currently producing or under development for production of minerals other than petroleum.
- (ii) Private exploration on other areas, which relates to exploration carried out on areas such as mineral claims, temporary reserves, etc. covered by authorities to enter, authorities to prospect and similar licences and authorities issued by the State Government for exploration for minerals other than petroleum.
- (iii) Other private exploration, which relates to exploration not directly connected with areas under lease, licence, etc. including general surveys, aerial surveys, report writing, map preparation and other off-site activities not directly attributable to particular lease or licence areas.

Information given in Table 9 on State Government exploration relates to exploration carried out by the Western Australian Department of Mines. Information on Commonwealth Government exploration is not available separately for States.

Definitions of terms used in Tables 9 and 10 are as follows:

Core drilling. Diamond drilling or any kind of drilling in which drill cores are taken.

Non-core drilling. Alluvial, percussion and other drilling in which drill cores are not taken.

Shaft. Vertical or sloping access to underground mineral deposit.

Adit. Horizontal or inclined access to underground mineral deposit usually from hillside.

Drive. A tunnel or level in (or parallel to and near) a mineral deposit.

Winze. Internal shaft in mine, usually connecting two levels in plane of lode.

Costean. A trench excavated to expose an ore deposit or to determine the direction of an ore body

# **Petroleum Exploration**

For the purpose of the statistical series compiled and published by the Bureau of Minera' Resources, Geology and Geophysics, petroleum and exploration consists of the search for and/o appraisal of deposits of crude petroleum and/or gas by geological, geophysical, geochemical and other means, including drilling. Included in the expenditure are the costs of drilling exploratory oil and/or gas wells and the testing of such wells. Also included are the costs of access roads, site construction, permits, licences and similar fees, relevant office building and furniture, transportation equipment, storage facilities, plant and equipment and review work if primarily for purpos of exploration for deposits of petroleum or natural gas. The cost of drilling developmental and/or gas wells and expenditure on production facilities and pipelines, and production costs, e are excluded.

Petroleum exploration data relate to years ended 31 December.

Information on direct Government expenditure on petroleum exploration is not available separately for States and Table 11 therefore relates to private exploration only. It should be noted, however, that expenditure shown in this table includes amounts of subsidy received from the Commonwealth Government.

# FISHERIES (INCLUDING WHALING)

NOTE. Catch and effort data contained in Tables 13 to 20 are compiled by the Western Australian Office of the Commonwealth Bureau of Census and Statistics from monthly returns collected by the Western Australian Department of Fisheries and Fauna from licensed commercial fishermen. Data relating to activities of amateur fishermen are not included.

Details of the value of fish, crustaceans and molluscs caught have been compiled by the Western Australian Office of the Bureau of Census and Statistics using data obtained from fish dealers, fish processors and fishermen's co-operatives. The values shown represent gross value paid to fishermen.

(a) The distribution of effort data has been estimated for those boats which caught both prawns and scallops in the same month. Scallops were caught by trawling only in the month of October, and as catch by this method was insignificant in 1971–72 details of catch and effort in trawling for scallops have not been shown separately.

# No. 20-Fish and Crustaceans: Catch by Method: 1971-72 ('000 lb)

<sup>(</sup>a) Excludes areas of woodlands which, prior to 1969-70, were classified as forests. (b) Excludes Flora and Fauna Reserves, Scenic Reserves, National Parks, etc. (c) Excludes employment in private and government-operated saw mills. (d) Felling, carting, etc.

# VALUE OF PRIMARY PRODUCTION

(excluding Mining and Quarrying)

### DEFINITIONS OF TERMS USED

Gross Value is the value placed on recorded production at the wholesale price realised at the principal market. In cases where primary products are consumed at the place of production or where they become raw material for a secondary industry, these points of consumption are taken as the principal markets.

Marketing Costs comprise freight, cost of containers, commission, and other charges incurred in marketing.

Local Value is the value recorded at the place of production, and is obtained by deducting Marketing Costs from Gross Value.

Cost of Goods Consumed in the Process of Production covers seed and fertilisers used, pickling, sprays, dips, fodder consumed, fuel and oil, and other selected costs of a similar nature.

Net Value represents the return to the producer (farmer, pastoralist, fisherman, etc.) and is the sum available for payment of wages, interest, rent, depreciation, other overhead costs, and for the producer's own income. It is obtained by deducting from Local Value the Cost of Goods Consumed in the Process of Production.

Gross and Local Values of primary production involve some duplication as they include the products of certain primary industries which are consumed as raw materials by other industries in the group (e.g. hay consumed by livestock). Furthermore, many of the materials consumed by primary industries are the products of secondary industry. However, duplication has been eliminated in calculating the Net Value of primary production by deducting the cost of both primary and secondary products consumed by primary industries. Therefore, Net Value of primary production should be used when comparing values for primary industries with equivalent values for secondary industry.

## MINING AND QUARRYING

Estimates of mining and quarrying values, as compiled and published in earlier editions of this bulletin for calendar years up to and including 1968, have been discontinued. They have been replaced by information obtained on a fiscal year basis in the 1968–69 integrated economic censuses (of which mining and quarrying form a sector) and subsequent censuses of mining and quarrying. Values derived from the 1968–69 and subsequent censuses are not directly comparable with figures for previous years because of changes in the census units, the scope of the census and the items of data.

Particulars of mining and quarrying activity derived from the 1968–69 and subsequent economic censuses, together with explanatory notes, are given in the first section of this publication.

# No. 23—Value of Primary Production (excluding Mining and Quarrying) (a)
